

Medical AC-DC Enclosed Power Supply

18V 300W with 5V/0.5A Standby / MDS-300ADB18

MDS-300ADB18

Highlights & Features

- Safety Approvals to IEC 60601-1 3.1rd ed. & IEC 60950-1
- Compliant with IEC 60601-1-2 4th Ed. Requirements
- Up to 190 Watt Convection in 3.5" x 5.5" x 1.75" Package
- Up to 800 K Hrs MTBF
- Suited for Type BF Medical Products.
- 2 x MOPP isolation

Safety Standards

CB Certified for worldwide use

| | |
|--------------------------------|---|
| Model Number: | MDS-300ADB18 |
| Unit Weight: | 610 g (1.35 lb) |
| Dimensions (W x L x H): | 88.9 x 140.0 x 45.0 mm (3.5 x 5.5 x 1.75 inch) |

General Description

Delta's new MDS-300ADB18 enclosed design offers a high energy density (8.8 Watts/in³) 3.5x5.5 inch design for Type BF patient access medical products. With operating parameters of 90 to 264 Vac universal input voltage, temperatures of -10 to +70 degrees centigrade, and altitudes of up to 5000 meters (16,400 feet), the design is well suited for a variety of both medical and non-medical applications. Other features include input surge of 300 Vac, low leakage current, no-load input power < 0.5 Watt, and 800K hour MTBF. This product is certified for EMC standards EN 55011 for industrial, scientific and medical (ISM) radio-frequency equipment, and EN 55022 for Industrial Technology Equipment (ITE) radio-frequency equipment. In addition, only recognized Japanese capacitors are used to ensure long product life.

An enhanced feature set, includes a 5 Volt/0.5 amp standby output, remote on/off, remote sense, and a power good signal that are included as part of the standard product.

The design, which has protection against shock compliant with 2XMOPP and Type BF requirements, has both medical (with risk report available), and ITE safety approvals, including cURus(US&Canada) /TUV/GB(China); plus, CB certificates with all national deviations. Full compliance with RoHS Directive 2011/65/EU for environmental protection is included.

Model Information (All with 5V/0.5A standby available):

| Model Number | Input Voltage | Output Voltage | Convection Current Output | Forced Air Current Output |
|--------------|---------------|----------------|---------------------------|-----------------------------------|
| MDS-300ADB18 | 90-264Vac | 18Vdc | 0-10.55A | 0-16.66A (with 10 CFM forced air) |

Specifications

Input Ratings / Characteristics

| | |
|---|--|
| Nominal Input Voltage | 100-240Vac |
| Input Voltage Range | 90-264Vac |
| Nominal Input Frequency | 50-60Hz |
| Input Frequency Range | 47-63Hz |
| Input Current (max) | 4A |
| Input Surge Voltage (max) | 300Vac for 100ms |
| Full load Efficiency (typ.) | 92.5% @ 115Vac/60Hz 93.5% @ 230Vac/50Hz, Reference Fig.1 |
| Standby Power (max) | 0.5W (Inhibit signal high, 18 volt turned off) @ 115Vac/60Hz, 230Vac/50Hz |
| Inrush Current (max) | 40A @ 230Vac, cold start |
| Input-PE(protective earth) leakage current (max) | 0.1mA @ NC ¹⁾ , 0.3mA @ SFC ¹⁾ |
| Output-PE(protective earth) leakage current for Type BF application (max) | 0.1mA @ NC ¹⁾ , 0.5mA @ SFC ¹⁾ |
| Power Factor (min) | 0.9 @ 115V/50Hz, 230V/50Hz, full load |

1) NC: normal condition, SFC: single fault condition

Leakage Current

| Input-PE Leakage Current | 100Vac/60Hz (Typ) | 264Vac/60Hz(Typ) | Delta Limit | IEC60601-1 Limit |
|---|-------------------|------------------|-------------|------------------|
| Normal Condition | 17.5uA | 43.5uA | 100uA max | 5000uA max |
| Single Fault Condition | 54.5uA | 153uA | 300uA max | 10000uA max |
| Output-PE Leakage Current for Type BF application | | | | |
| Normal Condition | 29.5uA | 81.5uA | 100uA max | 100uA max |
| Single Fault Condition | 43.7uA | 129.4uA | 500uA max | 500uA max |

Output Ratings / Characteristics (Main Output)

| | |
|---|--|
| Nominal Output Voltage (Vrated) | 18V |
| Total Regulation | ± 3% |
| Output Power | 300W 10CFM air, up to 190W convection air |
| Line Regulation (max) | ±0.5% |
| Load Regulation (max) | ± 1% |
| Ripple & Noise (typ.) | 1% pk-pk Vrated@300W load, (Refer to Fig. 2 & Fig. 3) |
| Start-up Time (max) | 2000ms @ 115Vac |
| Hold-up Time (min) | 10ms @ 100Vac and 115Vac, with 300W load 20ms @ 100Vac and 115Vac, with 190W load |
| Dynamic Response (Overshoot & Undershoot O/P Voltage) | ± 5% @ with 50-100% load change |
| Capacitive load (max) | 1500uF |
| Rise time (max) | 100ms |
| Remote Sense | Up to 500mV compensation for voltage drop across external wire connections to load. Short and reverse connection protected. |

(a) 115V (measured value=160mV)

(b) 230V(measured value=140mV)

1) Criteria A: Normal performance within the specification limits

2) Criteria B: Output out of regulation, or shuts down during test. Automatically restore to normal operation after test.

3) Asymmetrical: Common mode (Line to earth)

4) Symmetrical: Differential mode (Line to line)

5) Unless otherwise noted, requirements apply at 300 watt output load

Medical AC-DC Enclosed Power Supply

18V 300W with 5V/0.5A Standby / MDS-300ADB18

Dimensions

Mechanical drawing

Notes

- Dimensions are in mm(inches)
- There are two locations where assembled power supply is connected to the customer's product
 - Bottom mounting, use (4X) M3 screws to affix assembled power supply to product's enclosure. Extruded hole with thread must be withstand 9Kgf.cm (7.81lb-in) min. Maximum allowed screw penetration is 3.5mm (0.138 inch).
 - Side mounting, use (2X) M3 screws to affix one side of assembled power supply to the product's enclosure. Extruded hole with thread must be withstand 9Kgf.cm (7.81lb-in) min. Maximum allowed screw penetration is 3.5mm (0.138 inch).

Medical AC-DC Enclosed Power Supply

18V 300W with 5V/0.5A Standby / MDS-300ADB18

| Input Connector CN1 | |
|---------------------|---------|
| Pin 1 | Neutral |
| Pin 2 | Line |

CN1 mates with Molex housing 26033031 and Molex series 6838 crimp terminals.

Input Line can also be connected to pin 1, and Input Neutral can be connected to pin 2

| Output Connector | |
|------------------|--------|
| CN102 | Vo |
| CN103 | DC RTN |

Cross recessed pan head screws M3X0.5x10, with spring washers and flat washers, force required to tighten the screws is 7~8kgf.cm(6.1~7.0inch-lb)

| Control and STANDBY connector CN101 | |
|-------------------------------------|---------------------------------|
| Pin 1 | Remote sense + |
| Pin 2 | Remote sense - |
| Pin 3 | Power Good + |
| Pin 4 | Power Good -(DC RTN) |
| Pin 5 | Remote ON_OFF/INHIBIT + |
| Pin 6 | Remote ON_OFF/INHIBIT -(DC RTN) |
| Pin 7 | 5V Standby |
| Pin 8 | DC RTN |
| Pin 9 | 5V Standby |
| Pin 10 | DC RTN |

CN101 mates with Molex housing 1041421000 and Molex series 104539-8002 crimp terminals.

CN2 : PINGOOD JP-13T mates with KST:FDNYD1-187 or other applicable connectors.

System protective earth connection can be connected to the enclosed cover or to CN2.

| MDS-300ADB18 □□ | |
|-----------------|---|
| <u>AA</u> | Delta Standard |
| <u>AB</u> | A mating connector with Molex housing 1041421000 and Molex terminals 1045398002, with jumper wire between pins 5 and 6, will be inserted into CN101. This will allow the power supply to turn on, without user intervention, upon the application of input AC voltage Due to presence of mating connector, external connections cannot be made to pins 1-10 of CN101. |

Medical AC-DC Enclosed Power Supply

18V 300W with 5V/0.5A Standby / MDS-300ADB18

Functions

Start-up Time

The time required for the output voltage to reach 90% of its final steady state value, after the input voltage is applied.

Rise Time

The time required for the output voltage to change from 10% to 90% of its final steady state value.

Hold-up Time

Time between the collapse of the AC input voltage, and the output falling to 90% of its steady state value.

■ Graph illustrating the Start-up Time, Rise Time, and Hold-up Time

Medical AC-DC Enclosed Power Supply

18V 300W with 5V/0.5A Standby / MDS-300ADB18

Dynamic Response (18 Volt Output)

The power supply output voltage will remain within $\pm 5\%$ of its steady state value, when subjected to a dynamic load 50 to 100% of its rated current.

■ 50 to 100% Load

Inrush Current

Inrush current is the input current that occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

Overvoltage Protection

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on Page 5 under "Protections". Power supply will latch off, and require removal/re-application of input AC voltage in order to restart.

Overload & Over current Protections

The power supply's Overload (OLP) and Over current (OCP) Protections will be activated before the 18 volt outputs' current exceeds 160% of I_o (Max load). Upon such an occurrence, V_o will start to drop. Once the power supply has reached its maximum power limit, the protection will be activated and the power supply will go into "Hiccup mode" (Auto-Recovery). The power supply will recover once the fault condition causing the OLP and OCP is removed and I_o is back within the specified limit. For the standby output, the performance is the same, with the exception that the protection will be activated before the output current exceeds 1.06 amps.

Additionally, if the 18 Volts' lout is $>100\%$; but $<160\%$ for a prolonged period of time (depending on the load), the Over Temperature Protection (OTP) will be activated due to high temperature on critical components. The power supply will then go into latch mode.

Short Circuit Protection

The power supply's output OLP/OCP function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode", as shown in the illustration in the OLP/OCP section on this page. The power supply will return to normal operation after the short circuit is removed.

Over Temperature Protection

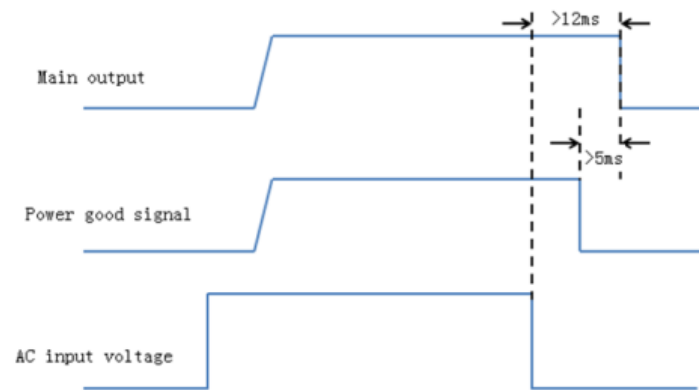

As mentioned above, the power supply also has Over Temperature Protection (OTP). This is activated when the overload condition persists for an extended duration and the output current is below the overload trigger point but $>100\%$ load. In the event of a higher operating temperature condition at 100% load, the power supply will run into OTP when the surrounding air temperature is higher than the operating temperature. When activated, the output voltage will go into latch mode until the input voltage is removed; then, reapplied, and the surrounding air temperature drops to its normal operating temperature.

Medical AC-DC Enclosed Power Supply

18V 300W with 5V/0.5A Standby / MDS-300ADB18

Power Good

Power Good+ pin is an open collector transistor (40V/600mA rating). A resistor (suggested value 10Kohm, 1/8W) can be added between 5V STANDBY pin (or, other available pull-up voltage that is no greater than 30V) and the Power Good+ pin (refer to figure below). Value of pull-up resistor may have to be adjusted, depending on voltage used, and other end-use conditions of the Power Good+ pin connection to the product. When AC input is on, Power Good+ pin will be high. When AC input is off, Power Good+ pin will be low. There will be a minimum of 5 milliseconds (at 190W load) between the time the power good goes to low level, and the time when the output reaches 90% of its rated value.

Remote ON_OFF/INHIBIT

Remote ON_OFF/INHIBIT can be used to enable or disable only the main output. When the main output is disabled, the +5V Standby output will continue to operate. This signal can be pulled down to a low level of 0.3 volts, or shorted to DC-Return, in order for the main output to be enabled; and, floated (no connection to the signal), or pulled up to a value greater than or equal to 3 volts, in order to disable the main output.

Remote Sense

Remote sense feature can be used to compensate for the extra voltage drop on output wires that are connected from the main output terminals, to the load. With wires connected from the remote sense pins, at the same locations as the wires from the main output, the remote sense function can compensate up to 500mV voltage drop. The power supply will not be damaged if the remote sense pins are shorted, or if a reverse/inverted polarity connection is made to the load.

Medical AC-DC Enclosed Power Supply

18V 300W with 5V/0.5A Standby / MDS-300ADB18

Certificate

All Delta Medical Power products conform to the European directive 2011/65/EU. RoHS is the abbreviation for "Restriction of the use of certain hazardous substances"

Delta has been certified as meeting the requirement of ISO 13485: 2003 and EN ISO 13485:2012 for the design and manufacture of switching power supply and adaptor for medical device.

In addition to a UL Total Certification Program (TCP) approved client laboratory for IEC60950 and IEC60065. Delta also has participated UL Client Test Data Program (CDTP) for IEC 60601
